

## Savonic production training suite

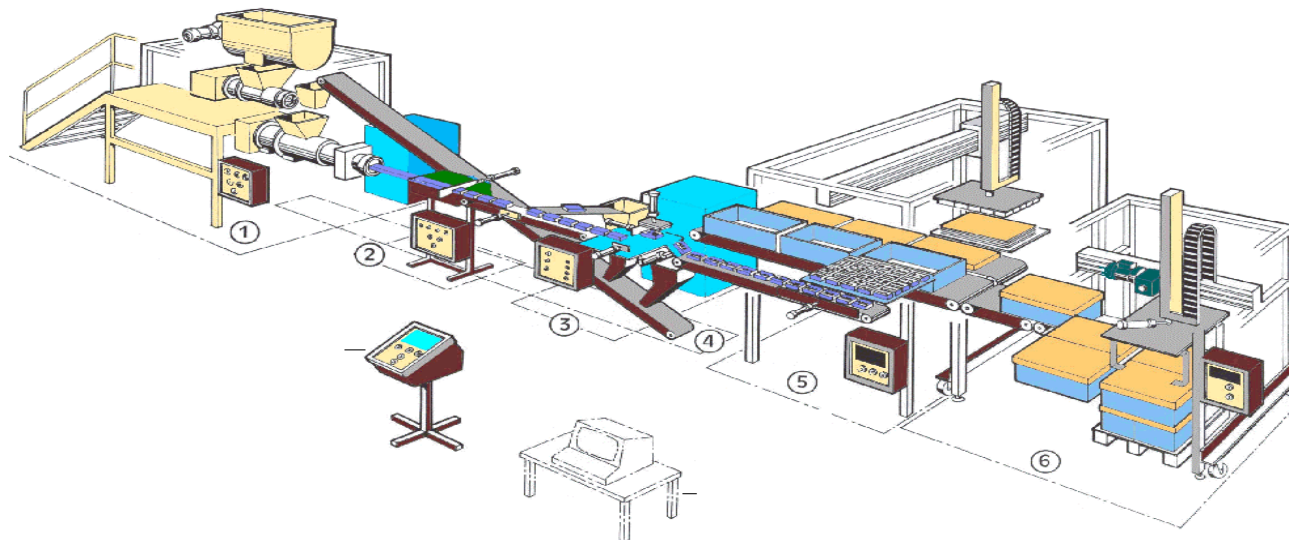

**Application:** Savonic is an industrial process for production of soap tablets. It includes a blender, refiner, extruder, continuous cutter, conveyor, press, weighing checking, packer and palletizer for the crates of soap.

**PcVue** handles the displaying and control of the machines, management of alarms and histories and optionally production control, maintenance and quality.

**Structure:** 1 PcVue station to supervise the running of the installation.

**Features:** A comprehensive, modular and developmental production suite that enables students to familiarize themselves with all aspects of a production line.

This system has been installed in England, Canada, France, Mexico and Tunisia.
